

AMENDMENTS TO THE CLAIMS

Please amend claims 7-9 as shown in the following list of claims:

1. (Previously Presented) A communication network system to send a data signal by way of a plurality of wireless communication terminals, wherein
said plurality of wireless communication terminals includes at least one mobile communication terminal moving on a predetermined route and a plurality of fixed communication terminals fixed along said predetermined route, data communication between the fixed communication terminals being made by way of the at least one mobile communication terminal.
2. (Previously Presented) A communication network system according to claim 1, wherein
the at least one mobile communication terminal comprises a plurality of mobile communication terminals, and
each of the fixed communication terminals includes a time information storage means to store time information specifying a time required for transferring said data signal to each of the other fixed communication terminals by way of each of the mobile communication terminals, timetable storage means to store a timetable of each of the mobile communication terminals and selecting means to select one of the mobile communication terminals to which said data signal is to be transferred based upon said time information and said timetable.
3. (Previously Presented) A communication network system according to claim 2, wherein
the mobile communication terminal selected by said selecting means is the one of the mobile communication terminals determined to reach a desired fixed communication terminal in the shortest time.
4. (Previously Presented) A communication terminal according to claim 2, wherein
said predetermined route is a circulating route, the plurality of mobile

communication terminals includes a first mobile communication terminal and a second communication terminal each of which circulates in a mutually opposite direction, said time information includes a first time information corresponding to said first mobile communication terminal, and second time information corresponding to said second mobile communication terminal.

5. (Previously Presented) A communication network system according to claim 1, wherein

said predetermined route includes a first route and a second route which share a common point with each other, a specified fixed communication terminal being fixed on the common point of said first route and said second route, and

said at least one mobile communication terminal moves on one of said first route and said second route, said at least one mobile communication terminal including a first terminal information storage means to store a first terminal information specifying a plurality of fixed communication terminals fixed along its respective route and a transfer means to transfer said data signal to said specified fixed communication terminal in the event said data signal is destined to a fixed communication terminal not specified in said first terminal information.

6. (Previously Presented) A communication network system according to claim 5, wherein

said specified fixed communication terminal includes a second terminal information storage means to store second terminal information specifying the fixed communication terminals fixed along each of said first route and said second route.

7. (Currently Amended) A communication network system according to claim 1, wherein

said at least one mobile communication terminal is provided on a regularly operating passenger bus, and said fixed communication ~~terminal~~ is terminals are provided at stop points of the regularly operating passenger bus.

8. (Currently Amended) A communication network system to send a data signal by way of a plurality of wireless communication terminals, wherein

said plurality of wireless communication ~~terminal~~ terminals includes at least one first communication terminal moving on a predetermined route, and a plurality of second communication terminals existing along said predetermined route, data communication between the second communication terminals being made by way of the at least one first communication terminal.

9. (Currently Amended) A communication network system according to claim 8, wherein

said plurality of second communications ~~terminal~~ terminals includes a plurality of fixed communication terminals fixed along said predetermined route and a plurality of user communication terminals each proximate to a respective one of the fixed communication terminals, data communication between the user communication terminals being made by way of the respective ones of the fixed communication terminals to which the user communication terminals are proximate.

10. (Previously Presented) A communication network system according to claim 1, wherein

said at least one mobile communication terminal is adapted for data communication with each one of the plurality of fixed communication terminals when said mobile communication terminal is at a respective point along said predetermined route at which said one of the fixed communication terminals is fixed.
